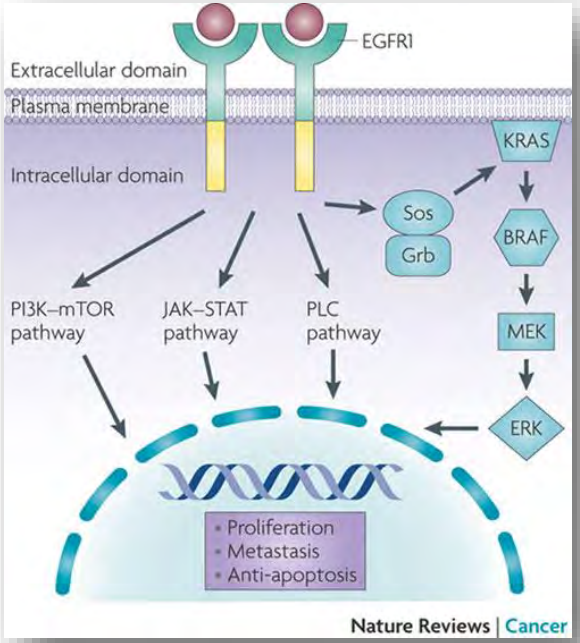
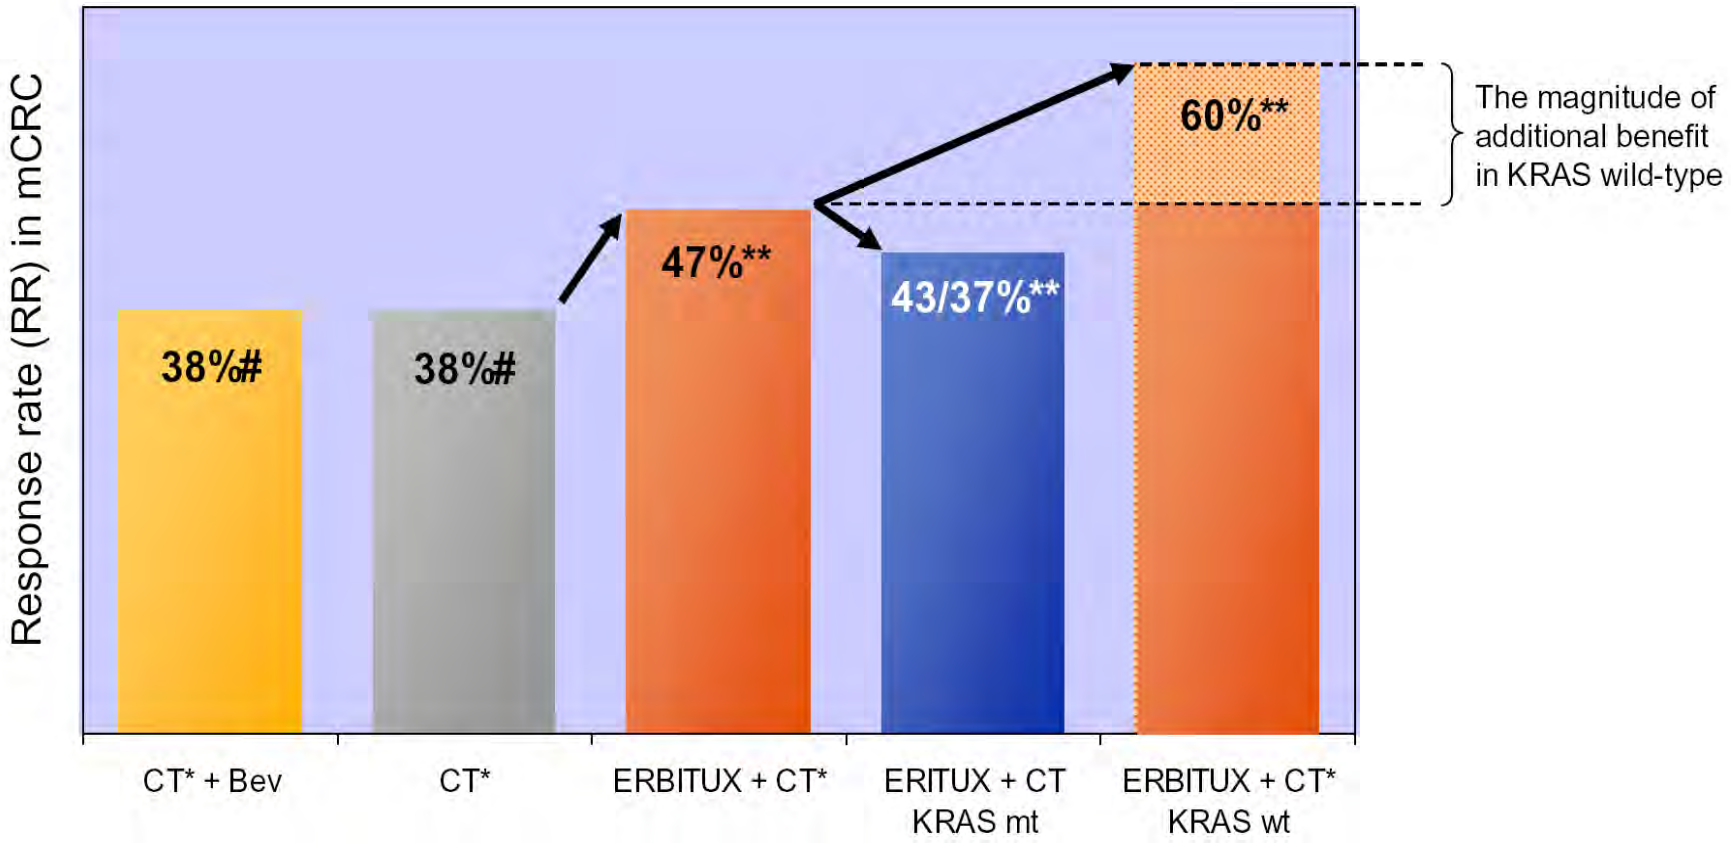
Anti-EGFR (Cetuximab) in Cancer

PEKING UNIVERSITY CANCER HOSPITAL
Cancer Biobank



2004	**BOND** – Establishes 3rd-line therapy in mCRC; reversal of resistance
2005	**Bonner trial**: Introduces targeted therapy into LA H&N with RT
2006	**NCIC CO.17** – Only sign. survival ever demonstrated for a single agent in mCRC 3rd-line; only ever positive QoL data!
2006	The highest resection rates of liver mets ever reported >20% – Concept of increased resectability proposed
2007	**EXTREME**: First progress after 25 years, first targeted therapy introduced into metastatic H&N cancer
2007	**CRYSTAL**: Increased resectability first time demonstrated in phase III
2008	**CRYSTAL & OPUS**: KRAS will change treatment practice of mCRC
2008	**FLEX**: First progress of targeted therapy for all patients in 1st-line NSCLC

Impact of KRAS on Activity (RR) of 1st-line mCRC Treatments for Illustration



*Standard CT: FOLFOX/FOLFIRI **data from CRYSTAL/OPUS #NO16966

结果：两组K-RAS突变情况

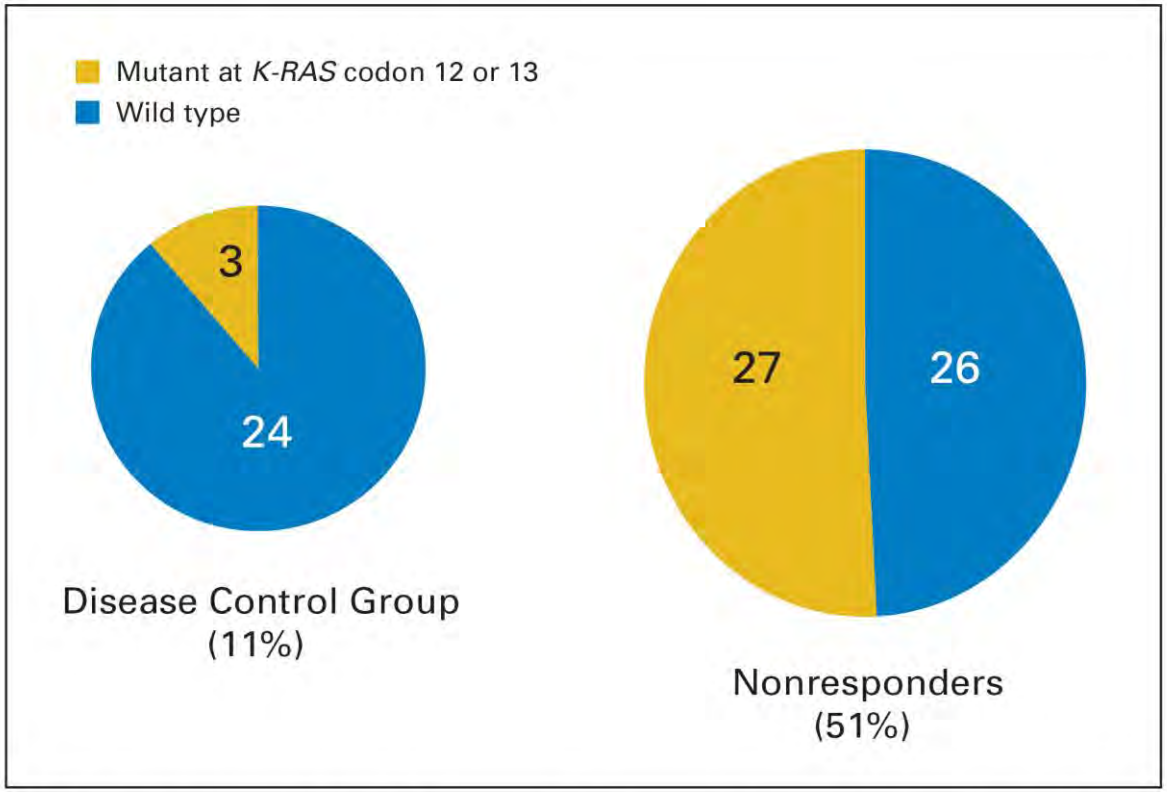


Fig 4. Mutation analysis of *K-ras* exon 2. *K-ras* mutations were detected in three patients with stable disease (SD) out of 27 disease control group patients (five partial responses + 22 SD). *K-ras* mutations were detected in 27 of 53 nonresponders. There is a statistically significant difference in *K-ras* mutation frequency between the two groups (Fisher's exact test, $P = .0003$).

Khambata-Ford S, et al. J Clin Onc 2007;25:3230–7

回顾性研究支持此观点：在化疗无效的转移性结直肠癌病人中，KRAS突变与对EGFR阻断剂无反应之间存在一定关联

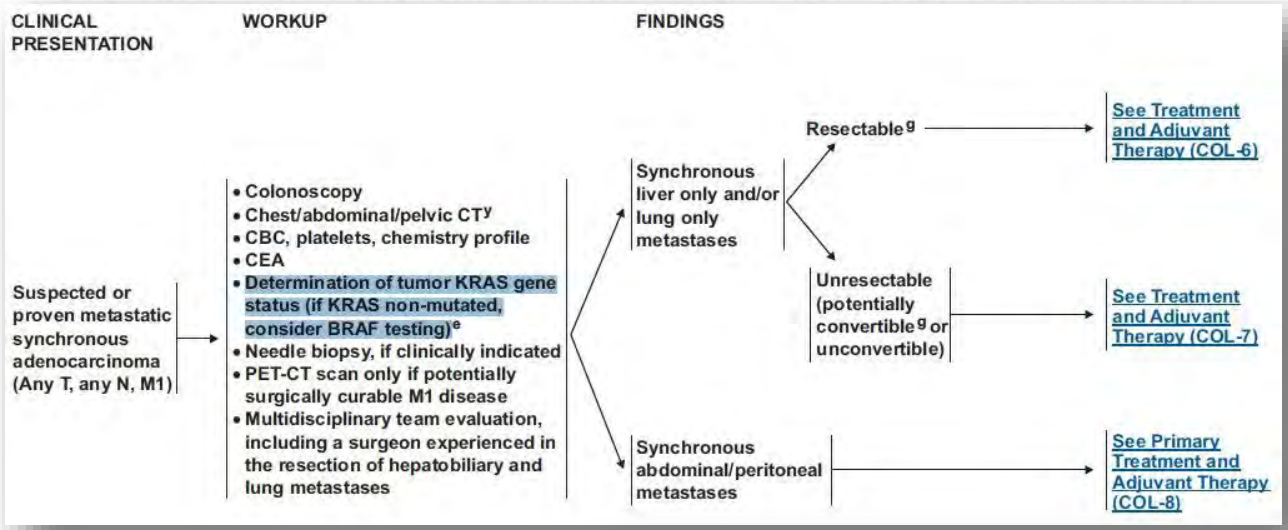
JOURNAL OF CLINICAL ONCOLOGY

BRAF Mutation Testing

- **Patients with a V600E BRAF mutation appear to have a poorer prognosis. Retrospective subset analyses suggest potential benefit from anti-EGFR monoclonal antibodies in the first-line setting with active chemotherapy regardless of V600E mutation status. Limited available data suggest lack of antitumor activity from anti-EGFR monoclonal antibodies in the presence of a V600E mutation when used after patient has progressed on first-line therapy.[46,47]**
- **Testing for the BRAF V600E mutation can be performed on formalin fixed paraffin embedded tissues. This is usually performed by PCR amplification and direct DNA sequence analysis. Allele-specific PCR is another acceptable method for detecting BRAF V600E mutation. This testing should be performed only in laboratories that are certified under the clinical laboratory improvement amendments of 1988 (CLIA-88) and qualified to perform highly complex clinical laboratory (molecular pathology) testing.**



[g] See Principles of Surgery (COL-B 2 of 3).
[ee] Determination of tumor KRAS (if KRAS non-mutated, consider BRAF testing). See Principles of Pathologic Review (COL-A 4 of 5) - KRAS and BRAF Mutation Testing.

在使用抗EGFR 单克隆抗体进行治疗之前，先取原发肿瘤组织或转移肿瘤组织样本进行基因突变检测，对KRAS 野生型的患者增加BRAF 突变的检测

对于存在BRAF V600E 突变的患者，不推荐用抗EGFR 单克隆抗体进行治疗

KRAS 第二外显子（第 12、13 编码子）突变检测的报告以及标准流程（SOP）

患者姓名： ZKW 诊断： 直肠癌 检测标本： 石蜡切片 时间： 2008-11-10 检测人： ZLH

EGFR 免疫组化结果 未知

检测流程：

阴性对照（可选）： 外周血（抗凝）→ 提取 DNA （Qiagen 69504）→ 浓度测定 60 ng/ul → PCR 反应 x 1

阳性对照： 目前已经有经测序证实的突变样本，每次测试必须加阳性对照样本 → PCR 反应 x 1；

待测样本： 穿刺活检组织/石蜡切片→ 提取 DNA （Qiagen 69504）→ 浓度测定 20 ng/ul → PCR 反应 x 2

**由于肿瘤组织中含有一定量的正常组织（wtKRAS），因此活检尽量选择肿瘤含量丰富的区域进行；石蜡切片尽量选取一张作 HE 染色，以判定肿瘤的大致范围，然后在其他切片上尽量刮取肿瘤细胞多的区域。*

PCR 反应条件 (50μl)

Component	Final Volume	Final Concentration

EGFR Targeting Drug in Gastric Cancer: Negative

PEKING UNIVERSITY CANCER HOSPITAL
Cancer Biobank

Lancet Oncol. 2013 May;14(6):490-9. doi: 10.1016/S1470-2045(13)70102-5. Epub 2013 Apr 15.

Capecitabine and cisplatin with or without cetuximab for patients with previously untreated advanced gastric cancer (EXPAND): a randomised, open-label phase 3 trial.

Lordick F, Kang YK, Chung HC, Salman P, Oh SC, Bodoky G, Kurteva G, Volovat C, Moiseyenko VM, Gorbunova V, Park JO, Sawaki A, Celik I, Götte H, Melezínková H, Moehler M; Arbeitsgemeinschaft Internistische Onkologie and EXPAND Investigators.

Collaborators (153)

FINDINGS: Between June 30, 2008, and Dec 15, 2010, we enrolled 904 patients. Median PFS for 455 patients allocated capecitabine-cisplatin plus cetuximab was 4.4 months (95% CI 4.2-5.5) compared with 5.6 months (5.1-5.7) for 449 patients who were allocated to receive capecitabine-cisplatin alone (hazard ratio 1.09, 95% CI 0.92-1.29; p=0.32). 369 (83%) of 446 patients in the chemotherapy plus cetuximab group and 337 (77%) of 436 patients in the chemotherapy group had grade 3-4 adverse events, including grade 3-4 diarrhoea, hypokalaemia, hypomagnesaemia, rash, and hand-foot syndrome. Grade 3-4 neutropenia was more common in controls than in patients who received cetuximab. Incidence of grade 3-4 skin reactions and acne-like rash was substantially higher in the cetuximab-containing regimen than in the control regimen. 239 (54%) of 446 in the cetuximab group and 194 (44%) of 436 in the control group had any grade of serious adverse event.

INTERPRETATION: Addition of cetuximab to capecitabine-cisplatin provided no additional benefit to chemotherapy alone in the first-line treatment of advanced gastric cancer in our trial.

SCIENTIFIC REPORTS

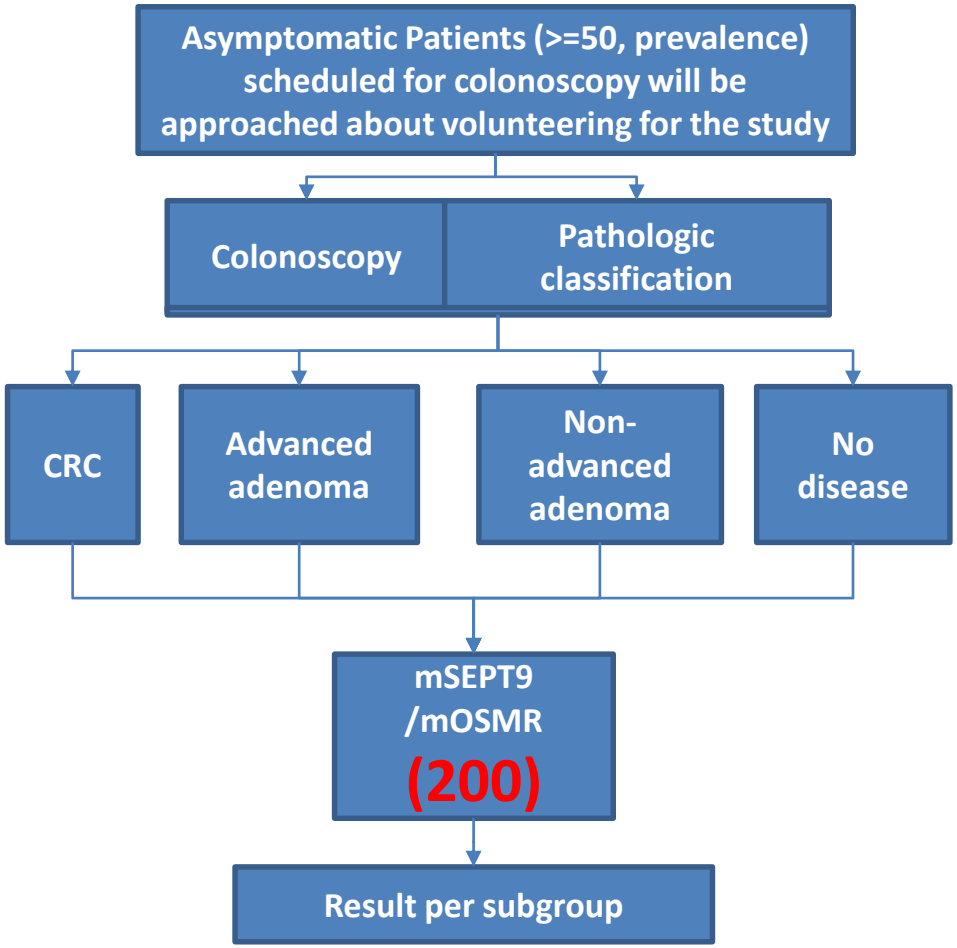
③ DIAGNOSTIC TRIAL

PEKING UNIVERSITY CANCER HOSPITAL Cancer Biobank

Assessed the accuracy of Circulating Biomarkers for detecting CRC in a screening population.



7941 enrolled. 53 CRC cases a standardised sensitivity of 48.2%; for CRC stages I–IV, values were 35.0%, 63.0%, 46.0% and 77.4%, respectively. Specificity was 91.5%

Conclusions The blood based mSEPT9 test showed that CRC signal in blood can be detected in asymptomatic average risk individuals undergoing screening. Clinical Trial Registration Number: NCT00855348

GUT 2013 2012-304149

分享：诊断类临床研究计划

What is known

- Current CRC screening guidelines include FOBT or colonoscopy.
  - FOBT exhibits a low compliance rate and low sensitivity.
  - Colonoscopy is gold standard for detection, Which however has a due to its high cost and inadequate patient acceptance.

Pilot Study

- Detection of CRC in peripheral blood by Septin 9[1,2]/ OSMR[3] DNA methylation has been validated by our lab in Q-PCR based testing assay

Biomarker	Overall	I-II Stage	III-IV Stage	Volunteer
SEPT9	72.26%(99/137)	69.27%(54/78)	76.27%(45/59)	8.26% （9/109）
OSMR	91.23%(156/171)	91.67%（88/96）	90.67%（68/75）	13.8%（15/109）
